

## Water Mist For Property Protection Purposes

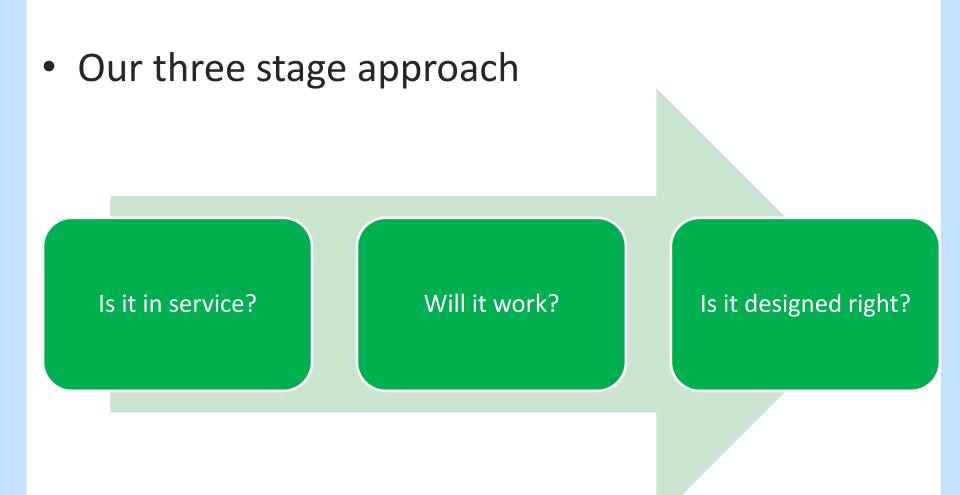

Paul Morrison-Zurich Insurance

#### Objectives

- 3 stage approach for existing systems
  - Is it in service?
  - Will it work?
  - Is it designed right?
- Zurich Recognized Solutions
  - Listed technology
- Case Studies
  - Sauna
  - Community College
  - Industrial Oil Cooker

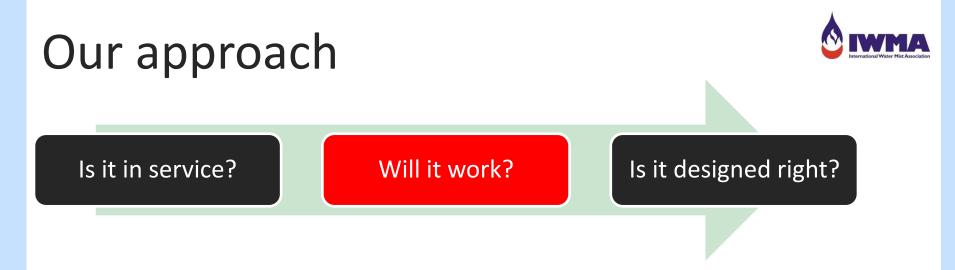

Is it in service?

Will it work?

Is it designed right?

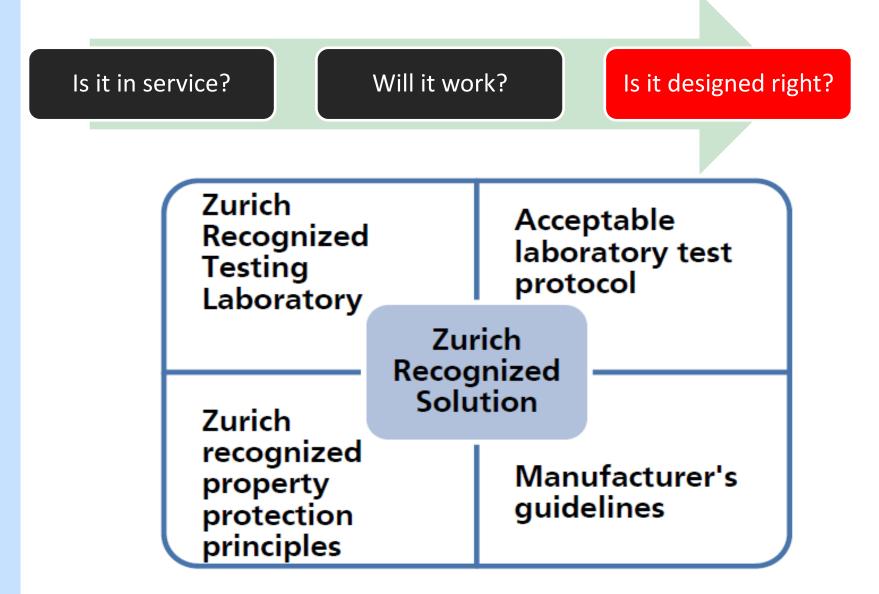

- Valves open?
- Power at pump?
- Impairments?
- Water in tank?
- Town main water supply available?

- Service and maintenance
- Regular testing
- Pumps achieving rated duty?
- Dry systems trip tested?

#### Our approach

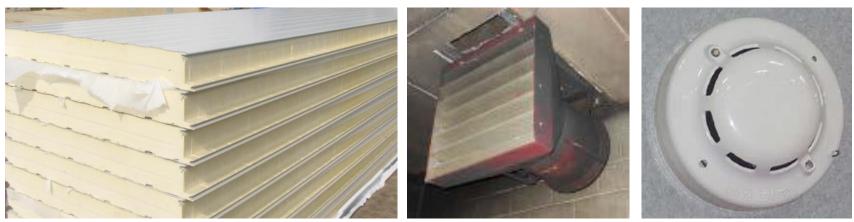

#### **Zurich Recognized Solutions**

- May include a range of fire prevention and protection technology products
  - Not limited to active fire protection systems
  - Construction products and passive systems can be assessed

**Building materials** 

Fire protection devices

Fire detection devices

#### Case Studies – Water mist

- Sauna
- College / School
- Industrial Oil Cooker

# Example - How do we consider water mist?

- NFPA 750
- BS8458
- BS8489
- CEN14972
- FM/ANSI 5560
- VdS
- SP
- DNV
- IMO

1.1\* Scope. This standard contains the minimum requirements for the design, installation, maintenance, and testing of water mist fire protection systems. This standard does not provide definitive fire performance criteria, nor does it offer specific guidance on how to design a system to control,

suppress, or extinguish a fire. Reliance is placed on the procurement and installation of listed water mist equipment or systems that have demonstrated performance in fire tests as part of a listing process.

#### **Fire Protection Specification Review**

A review of a proposed fire protection design

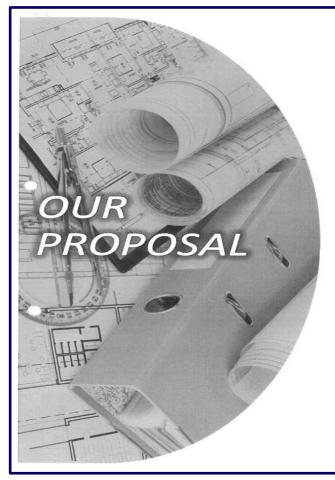

### Case study – water mist for a **Community College Proposal statements**

- Confirm costs for design, supply, installation and commissioning of our approved low pressure water mist system to all relevant areas of the scheme
- 30 minute water supply duration based on 5 nozzles (72m2) to the commercial OH1 classified hazard
- The installation and design will be fully compliant to the relevant British Standards for this development with specific referral to BS 8489:2016
- System proposed has been fully tested by BRE to both residential and commercial standards (BS 8458:2015 and BS 8489:2016)
- Low pressure water mist is an emerging technology...very few companies that can provide a system that fully meets requirements of British **Standards**

### Case study – water mist for a Community College Proposal statements – red flags

- Confirm costs for design, supply, installation and commissioning of our approved low pressure water mist system to all relevant areas of the scheme

## Case study – Community College

**BSI Standards Publication** 

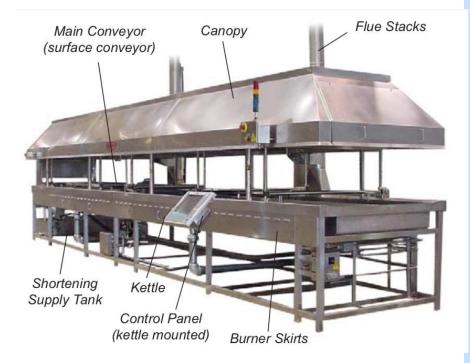

#### Case study – Bakery

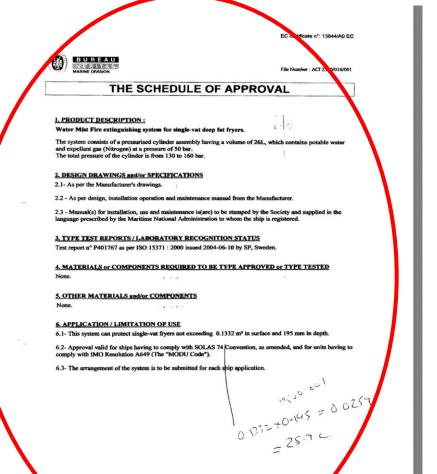

- Industrial oil cooker (deep fat fryer)
- Doughnut production
- 8m x 1.1m containing 2360L oil

#### Test laboratory certification

- Page 2

#### Test laboratory certification

DFL ApS Svalbardvej 13, DK-5700 Svendborg, Denmark Tel: +45 6262 1024 - Fax: +45 6262 3661 CVR nr. 2921 3542

#### 1.0 Purpose of tests:

The fire tests were conducted in a 1 x 3m tray with 150 l of frying oil to test the fire fighting performances of the VID FIRE-KILL N-pipe with BM1 nozzles installed in a Low Pressure Water Mist System.

#### 2.0 Test hall:

DFL is an international accredited fire test laboratory. The fire test laboratory is accredited in accordance with DS/EN ISO/IEC 17025:2005 by DANAK accreditation Reg. No. 487.

The fire tests were conducted by Danish Fire Laboratories (DFL) in DFL's fire test hall at Svalbardvej 13, DK-5700 Svendborg, Denmark.

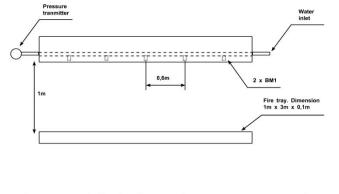

The test hall is insulated and heated. The test hall volume has a floor area of approx. 19,5m x 19,5m and a height of 15m. The test hall is equipped with an adjustable pendent ceiling. The ceiling size, position and height are adjustable. The test laboratory has water storage tanks and continuous fresh water supply, pump station with controlled water pressure supply and installations for handling of smoke and waste water.

#### 2.1 Fire test room:

The sides of the hall were measured to  $19,6m \ge 19,65m$ . The mock-up was placed in centre of the test hall.

#### 2.2 Fire test set up:

2.2.1 Test fire was constructed as the drawing shows underneath.

150 l Fat Fryer protected with N-pipe with BM1 nozzles

Requirements for the System". For use in Machinery Spaces of Cleagary A of volume geositer that 500et for the protection of local hazads. The capacity and arrangement of spray nozzles is to be devolved in the following: Table 2:1 for passenger ships, cargo ships, pacits, high need caff and tailates QE: When the system is provided on board IL Cleases inland voluence ypacsenger ships, the capacity and arrangement of the nozzles shall be specially considered in the delays along in all cases. Production have no be manufactured in accordance with quality conted system which shall be maintained to ensure that items are of the same standard as the approved prototype.	Requirements for the System". To use in Machinery Spaces of Category: A of volume greater that SN0w for the protection of local barands. The capacity and arrangement of space nazzles is to be denoted in the following: Table 2.1 for present spaces of a display space of the sp	CONDITIONS OF CER	TIFICATION			
For use in Machinery Spaces of Category A of volume growter that SBMe for the pretection of local bazeds. The cayout pand carrangement of appropriates in the dense in the following the starting Table 2-16 protecting while, or cayo thips, petchs, high preed cant and unkners O.B: When the system is provided on boards. U.G. casos inliand volumery passenger ships, the capacity and arrangement of the nozzles shall be specially considered in the delays stages in all cases. Production them are not be manufactured in accordance with a quality control optime which shall be maintained to ensure that items are of the same standard as the approved prototype.	Torue in Machinery Specer of Catigopy: A of ordening genate that SR0e for the protection of local barands. The copyring and narrangement of topy marzise is to be denoted in the following: Table 2:1 for passenger ships, cargo ships, packs, high speed carl and tarkers QB.           When the system is provided on board IR classed inflam denotes and an of the mozies shall be specially considered an the design stages in all cares. Production times are to be manufactured in accordance with a quality control species wish shall be maintained to ensure that items are of the same standard as the opproved prototype.           See General Notes.         Contract:           Note Designation         Mox Distance           M         M	1. The system has been	en designed in accore	lance with IMO MSC	/Circ. 913, Annex,	"Principle
Table 2:16 proisenger ships, corgo ships, yuchis, high speed card and turkero <u>DE</u> . When the system is provided on board LR Cassed inland valentwork passenger ships, the capacity and arrangement of the nozzles shall be specially considered in the design stages in all cases. Production: there are to be manufactured in accordance with quality control system which shall be maintained to ensure that items are of the same standard as the approved proketype.	Table 2:1 for passenger ships, origin ships, jindsh, ligh apoel carl and tarkness QE:           When the system is provided on board IR & classed indust valentwarp passengers ships, the capacity without the provider of board in a devention of the nozzles shall be specially considered at the design stages in all cases.           Production in times are to be manufactured in accordance with a quality control system which shall be maintained to ensure that items are of the same standard as the approved prototype. #### Take away messages

- Zurich Recognized Solutions Methodologies is a powerful tool to evaluate existing and proposed installations.
- It is based on basic fundamental criteria that should be expected to provide a suitable level of compliance and protection
- Zurich's goal is beyond 'Life Safety' we also want Property Protection systems.
  - People can escape a fire safely
  - The building can be occupied quickly after an event
  - Businesses can re-start operations from the same location
- Your objective may be a different one is it fully considered ?
